

Microbiology Testing

Reliable, cGMP-compliant, routine and specialized microbiology testing for pharmaceutical, biotech, and medical device programs, with consistent execution and clear communication. We provide dependable microbiology support across routine and complex programs, with a team that stays engaged and accessible throughout your testing. Many microbiology methods look compliant, but fail in practice due to low recovery, inhibitory products, poor neutralization; symptoms of a method that doesn't scale to real samples. Our team focuses on creating a method that actually works for your needs.

Core Testing Capabilities

- USP <61> Microbial Enumeration
- USP <62> Tests for Specified Microorganisms
- USP <60> *Burkholderia cepacia* Complex
- USP <71> Sterility Testing
- USP <85> Bacterial Endotoxins
- USP <788> Particulate Matter in Injections
- USP <1116> and <1231> Environmental, Water & Utilities Monitoring

Industries Supported

- Pharmaceutical & Biologics
- Medical Devices
- Combination Products
- Contract Manufacturing
